InCommand Mitiga

Platform capability map — one multi-agency platform, three products, the ICS / FEMA backbone

Realising the RESPONDER concept · FEMA ICS (Unified Command) · local-first, national-capable

DRAFT for planning
15 October 2026 · A0

Call received | **Emergency** | **Human declaration · JOC** | **DISASTER** | **Operational periods (Planning P)** | **De-escalation & demob** | **Closure / after-action**

CAD routes requests in-platform to partner agencies (ER24 / Fire / Police / EMS), who see them on their own control-room dashboards — no phone tag. JOC declares a disaster — a human gate, never automated — which activates the full ICS machinery (Unified Command: agencies coordinate, none commands another). The gate is the cost control.

Call-taking & dispatch

The CAD building · emergency-level · sellable standalone

Call intake — NEW

- ☆ New call → incident record
- ☆ Priority & type triage
- ☆ Incident number + timestamp

Caller intelligence — NEW

- ☆ Caller database + history
- ☆ Speech-to-text call summary
- ◐ Multilingual STT (siSwati/isiZulu/Afr)
- ☆ Recorded call + playback

Locate & plot

- ☆ Call-taker map plotting
- ☆ ANI/ALI caller location
- ✓ On the shared map layer

Dispatch — NEW

- ☆ Unit recommendation + CAD board
- ☆ Unit status: available/enroute/on-scene
- ☆ Station / apparatus status
- ✓ Shift management

Route to agencies — MULTI-AGENCY

- ☆ In-platform request → ER24 / Fire / Police / EMS
- ☆ They see it on their control-room dashboard
- ☆ Acknowledge & respond in-system (no phone tag)

Bridge → JOC — FLOW

- ☆ Activated call + summary + location
- ☆ Over the event bus, near real-time
- ☆ JOC sees it the instant CAD dispatches

Disaster management · JOC

The hub — sees everything · organised by the 5 ICS sections

← from CAD: activated call + summary + location | from Risk: dormant pre-plan →

Command · IC + Command Staff — THE HUB

- ★ Escalation capture: emergency → disaster
- ★ Declare disaster · activate (human gate)
- ✓ Command dashboard / big-screen COP
- ✓ Situation · staging · posture
- ◐ Live bodycam viewing + RoIP listen-in
- ★ Public warning / mass alerting (CAP · red zones)
- ★ Safety Officer (208 / 215A) · PIO · Liaison
- ✓ Approve IAP / ICS 202 · analytics
- ★ De-escalate · close · after-action report

Planning P — the operational-period cycle (the heartbeat the forms hang on)

Size-up & safety → IC sets objectives → Incident briefing (ICS 201) → Tactics meeting (215 / 215A) → Assignments (ICS 204) → Compile IAP (202 + 205/206/208) → Execute op. period → New period ↻ / demob

Operations

- ✓ Tactical ops · field units
- ★ Branches · Divisions · Groups
- ★ Staging areas · Air ops (ICS 220)
- ✓ Task & status boards · ICS 204
- ★ Resource check-in / check-out

Planning

- ★ Planning P / operational-period engine
- ★ Resource status spine
- ✓ Situation · ICS 201/202/215/215A
- ◐ Linked auto-populating ICS forms
- ★ Demobilisation: release + check-out
- ★ Incident closure + after-action

Logistics

- ✓ Personnel · inventory · resource requests
- ★ Resource ordering (ICS 215)
- ☆ Mutual-aid sharing: cross-region / province (roadmap)
- ◐ Comms · ICS 205/206
- ★ Medical · food · facilities · ground support

Finance / Admin — NEW

- ★ Live response-cost dashboard
- ★ Cost unit · keep IAP in budget
- ★ Time unit · timekeeping
- ★ Procurement · compensation / claims
- ☆ Not always activated

Risk, planning & mitigation

Pre-incident · for businesses · sellable standalone

Plan intake — SSM

- ◐ DXF / AutoCAD floor + site plans
- ◐ 3D & plan views
- ◐ Layer / floor extraction

Surveys

- ◐ Fire & life-safety markers
- ☆ Risk & hazard surveys
- ☆ ArcGIS layers: flood · fire · imagery
- ☆ Environmental / flood lines · hazard register

Pre-plans — SHARED

- ★ Dormant event templates
- ★ Pre-mapped zones, hazards, hydrants
- ★ Share to agencies — per site or per agency
- ★ Fire chief arrives already holding the plan

Example flow — WHY

- ★ Sappi: site plan + surveys → pre-plans
- ★ Sits dormant inside JOC
- ★ JOC activates on the day → fully populated
- ★ Cuts response time dramatically

Partner agencies on the platform — each in its own control room — MULTI-AGENCY · UNIFIED COMMAND

ER24 / EMS	Fire & Rescue	SAPS / Police	Traffic / Metro	NDMC / Province
dashboard · its requests + shared pre-plans	dashboard · pre-plan on arrival	dashboard · routed requests	dashboard · road & access	roll-up view (national-capable)

CAD routes a request in-platform → the right agency sees it on its own screen and responds. Agencies coordinate under Unified Command — each keeps authority over its own resources; none commands another.

Ground control — boots on the ground

Field responders

- ✓ Responder app: assignment, status, photos
- ✓ Distress / man-down
- ◐ Offline field capture + queue

L310 bodycam

- ◐ Location · SIP · WebRTC (refine)
- ✓ Live video to JOC

Virtual PBX / RoIP gateway — NEW

- ☆ WebRTC/VoIP ↔ two-way radio bridge
- ☆ JOC listen-in on ground net
- ☆ On-site power supply

Tracking server — background

Vehicle tracking

- ☆ Teltonika FMC (CAN/OBD, driver ID)
- ◐ GPS Worx option

Asset tracking

- ☆ Teltonika BLE tags (Jaws, defib)

Ingest

- ☆ MQTT / Codec → live positions on map

Shared platform core — build once, every product runs on it

Identity & SSO · Multi-agency tenancy (district → province → national) · RBAC (role · ICS section · agency · building) · GIS / map + ArcGIS hazard layers · Personnel & resource registry · Comms backbone · Incident data model · Cross-org plan / event sharing · Event bus / webhooks (the bridge) · Device registry · Offline-first sync (per node) · Audit log · No-code board / form builder · Module licensing

Hosting: cloud SaaS · centrally hosted in Gauteng · region-separated from Mpumalanga for resilience · maintained by us (no code handover).

Resilience — mission-critical: offline-first per node — each building keeps running if the WAN link (or national internet) drops; cross-section interconnect degrades to analog, the software stays up. Redundant WAN (dual ISP + LTE failover). The system must not die when it is needed most.

Decided (boss call, 16 Oct) — and what's still open

- ✓ FEMA / ICS 5-section structure — ADOPTED. Ditch legacy. (Policy-endorsed best practice; fills the national multi-agency standard SA never built.)
- ✓ Build tenancy as a hierarchy now; national deployment is Phase 3. Local-first in Ehlanzeni (mandated contract — adoption guaranteed).
- ✓ Multi-agency on the platform — agencies get control-room dashboards; CAD routes in-platform; Unified Command (no agency commands another).
- ✓ Pre-plan per site or per agency, shared to the responding agencies. Public warning (CAP) via SMS — contacts secured, Phase 2.
- ✓ Hybrid edge server in Ehlanzeni (local cache + offline) — pending a horsepower check on the existing servers.
- ? Open: confirm current SA regs to cite (NDMC / Gazette — amendments underway) · STT languages · tracking ingest (Teltonika Codec vs GPS Worx).
